

What Makes A Living Thing?

Chorus *What makes a living thing go 'zing'?
What does it need to survive?
Seven 'Life Processes' common to all,
Show that it is alive! Show that it is alive.*

Verse 1 Let's start off with MOVEMENT,
Moving around makes sense.
It's best to get from 'a' to 'b'
And not sit on the fence.
RESPIRATION brings out energy
So that we can move,
SENSITIVITY means our senses
Help our lives improve.

Chorus *What makes a living thing go 'zing'.....*

Verse 2 GROWTH is how a body
Changes to big, from small.
This might just take a hundred years,
Or not much time at all.
REPRODUCTION means new life
Is made every single day.
Humans, animals and the plants,
They find a special way!

Chorus *What makes a living thing go 'zing'.....*

Verse 3 Then there's 'waste disposal',
Something that must be done.
EXCRETION is the name for this,
Performed by everyone!
Living things must take in nutrients,
Food to you and me!
This is known as NUTRITION
And creates more energy.

Chorus *What makes a living thing go 'zing'.....*

Repeat *Show that it is alive.*
