

# Sound Is All Around

**Verse 1** Just close your eyes then concentrate  
And listen for a sound.  
How many different noises  
Do you notice all around?  
Sound travels to our ears through solids,  
Liquids and the air!  
It can't pass through a vacuum, though,  
Because there's nothing there!

**Chorus** *High or low, loud or soft,  
Long or short, smooth or rough,  
Mixed together make a sound!  
Sound is all around!*

**Verse 2** A sound is made through something  
Called 'vibration', did you know?  
An object moving quickly,  
Up and down, or to and fro.  
The nearby air vibrates  
And carries waves of sound beyond,  
Like ripples spreading out  
When you throw pebbles in a pond.

**Chorus** *High or low, loud or soft.....*

**Verse 3** The outer ear picks up the waves,  
A job which must be done,  
Before your ear drums both vibrate  
And pass the info on!  
Through tiny bones and nerves  
It makes its way straight to your brain  
And then you recognize the sound,  
Which is the basic aim!

**Chorus** *High or low, loud or soft.....*

**Repeat** *Mixed together make a sound! Sound is all around!  
Mixed together make a sound! Sound is all around!  
Yeh!*
